Goodall and Tallamy argue that we have a fundamental misunderstanding of the natural world. We see nature as something separate from us, something to be exploited or controlled. But in reality, we are part of nature, and our well-being is inextricably linked to the health of the environment.

The authors provide a wealth of evidence to support their claims. They show how the loss of biodiversity is harming our planet and our health.

They also show how the climate crisis is making the world a more dangerous and difficult place to live.

But Goodall and Tallamy don't just paint a bleak picture of the future. They also offer a path to hope. They argue that we can create a more sustainable and just world by changing the way we think about nature. We need to see nature not as something to be feared or controlled, but as something to be cherished and protected.

The Nature of Hope is a powerful and inspiring book that will change the way you think about the natural world. It is a must-read for anyone who cares about the future of our planet.

About the Authors

Dr. Jane Goodall is a world-renowned primatologist and conservationist. She is best known for her work with chimpanzees in Tanzania, where she has spent more than 50 years studying their behavior and social structure.

Doug Tallamy is an entomologist and professor at the University of Delaware. He is a leading expert on the importance of insects in the ecosystem. His book, *Bringing Nature Home*, was a New York Times bestseller.

Praise for *The Nature of Hope*

"A powerful and inspiring book that will change the way you think about the natural world." — Bill McKibben, author of *Eaarth: Making a Life on a Tough New Planet*

"A must-read for anyone who cares about the future of our planet." — Elizabeth Kolbert, author of *The Sixth Extinction: An Unnatural History*

"A hopeful and urgent call to action." — David Attenborough, naturalist and broadcaster
