## Step-by-step instructions

1. **Remove the carburetor from the engine.** Before you can rebuild the carburetor, you'll need to remove it from the engine. To do this, disconnect the fuel line and the vacuum lines. Then, remove the bolts that hold the carburetor to the intake manifold.
2. **Disassemble the carburetor.** Once the carburetor is removed from the engine, you'll need to disassemble it. To do this, remove the bolts that hold the carburetor body together. Then, carefully separate the carburetor body from the base plate.
3. **Clean the carburetor parts.** Once the carburetor is disassembled, you'll need to clean the parts. To do this, spray the parts with carburetor cleaner and then scrub them with a brush. Be sure to get into all the nooks and crannies.
4. **Inspect the carburetor parts.** Once the parts are clean, you'll need to inspect them for wear and tear. Replace any parts that are damaged or worn out.
5. **Reassemble the carburetor.** Once the parts are inspected, you can reassemble the carburetor. To do this, first place the base plate on the carburetor body. Then, bolt the carburetor body to the base plate. Finally, install the carburetor on the engine.
